

1. IDEATION PHASE

Medical Diagnosis Center by Service Portal (ServiceNow)

ServiceNow IT Service Management (ITSM)

1.1 Introduction

The ideation phase identifies the healthcare service problem and proposes a ServiceNow-based solution for managing medical diagnosis center activities. The project focuses on digitizing patient registration, diagnostic test booking, appointment management, report generation, and administrative operations through a centralized ServiceNow application and Service Portal.

1.2 Problem Statement

In a medical diagnosis center, managing patient information, diagnostic tests, appointments, and medical reports manually can be time-consuming and difficult to track. Patients may face difficulties while registering for tests and checking appointment or report details. Administrative staff also need an organized system to manage bookings, cancellations, payments, and reports efficiently.

1.3 Proposed Solution

The proposed solution is a **Medical Diagnosis Center application in ServiceNow** with a dedicated Service Portal. The system provides a centralized platform for managing patients, diagnostic tests, appointments, and reports. It automates important activities such as appointment management, cancellation refund calculation, report creation after completion of an appointment, and approval or rejection details.

1.4 Project Objectives

- Create a centralized system for patient registration and management.
- Provide an organized catalog of available diagnostic tests.
- Allow patients to book diagnostic test appointments through the Service Portal.
- Manage appointment information and status efficiently.
- Automate refund calculation when an appointment is cancelled.
- Automatically create reports when an appointment is completed.
- Maintain complete and traceable patient, appointment, and report information.
- Provide an easy-to-use Service Portal for patients and administrators.
- Reduce manual work and improve the efficiency of diagnosis center operations.

1.5 Proposed Medical Diagnosis Center Flow

Patient registers through the Service Portal → Patient selects a diagnostic test → Patient books an appointment → Appointment details are stored in ServiceNow → Appointment is processed by the diagnosis center → Appointment is completed → Medical report is generated automatically → Report details are made available through the system.

For cancelled appointments → Cancellation is processed → Applicable refund amount is calculated automatically → Appointment information is updated.

1.6 Expected Outcome

The project is intended to provide a centralized and consistent platform for managing medical diagnosis center activities. The system should simplify patient registration, test booking, appointment management, cancellation processing, and report generation while providing administrators with better visibility and control over the complete process.
