

2. REQUIREMENT ANALYSIS

Medical Diagnosis Center by Service Portal (ServiceNow)

ServiceNow IT Service Management (ITSM)

2.1 Introduction

Requirement analysis defines the requirements that the **Medical Diagnosis Center ServiceNow application** must achieve. The requirements are based on the business objectives and functional scope of the project. The analysis identifies the required features for patient management, diagnostic test booking, appointment processing, report management, cancellation handling, and Service Portal access.

2.2 Business Objectives

- Provide a centralized platform for managing patient information.
- Allow patients to register through the Service Portal.
- Provide an organized list of available diagnostic tests.
- Enable patients to book diagnostic test appointments.
- Maintain complete appointment and patient details.
- Support appointment cancellation and refund processing.
- Automatically generate medical reports after completed appointments.
- Provide administrators with better control over diagnosis center operations.
- Maintain accurate and traceable records throughout the process.
- Improve service visibility and reduce manual administrative work.

2.3 Functional Requirements

Requirement	Description
Patient Registration	Allow patients to register and maintain their personal details through the Service Portal.
Diagnostic Test Management	Create and manage diagnostic tests with relevant test information.
Test Selection	Allow patients to view available diagnostic tests and select the required test.
Appointment Booking	Allow patients to book appointments for selected diagnostic tests.

Requirement	Description
Appointment Management	Create, update, and track appointment records and their status.
Appointment Cancellation	Allow cancellation of appointments and process the applicable refund amount.
Report Generation	Automatically create a report when the corresponding appointment is completed.
Report Management	Maintain generated report information and make it available through the system.
Approval/Rejection Handling	Update the relevant details when an appointment or request is approved or rejected.
Service Portal Access	Provide a user-friendly portal for patients to access the required services.

2.4 Stakeholders

Stakeholder	Role	Needs / Expectations	Impact of Automation
Patients	Service users	Easy registration, test booking, appointment tracking, and report access	Faster and more convenient service
Diagnosis Center Staff	Operational users	Manage patients, tests, appointments, and reports	Reduced manual work
Medical/Diagnostic Staff	Test and report processing	Access accurate appointment and test information	Better information management
ServiceNow Administrator	System administrator	Configure tables, applications, portal, and security	Centralized system administration
Management	Supervisory role	Monitor diagnosis center activities and records	Improved operational visibility

2.5 System Requirements

- ServiceNow platform with appropriate application configuration.
- Service Portal for patient-facing services.

- Patient, Diagnostic Test, Appointment, and Report tables.
- Appropriate roles and permissions for different users.
- Business rules and automation for appointment and report processing.
- Database records for maintaining patient and diagnostic information.
- Modern web browser for accessing the Service Portal and ServiceNow application.
- Suitable administrative access for configuration and testing.

2.6 Acceptance Criteria

The project is considered successful when the major requirements are implemented and tested successfully. The system should allow a patient to register, select a diagnostic test, book an appointment, and track the appointment status. The system should also process appointment cancellation and refund information, generate a report after appointment completion, and maintain accurate patient, appointment, test, and report records.
